PVC Endotracheal Tube With Suction Lumen

The Endotracheal Tube with Suction Lumen is a single-use airway management solution made of medical-grade PVC ¹with excellent chemical stability.

- The airway tube is smooth inside and outside, with no burrs and no impurities. Latex and DEHP free.
- The Bevel tip and Murphy hole are smoothed to minimize damage to the airway during insertion.

- The suction lumen effectively aspirates subglottic secretions and reduces the incidence of iatrogenic infections and ventilator-associated pneumonia.
- Curvature design of compliant tracheal tube² (Magill Curve).
- The cuff is thin-walled, soft and frosted, with a smooth transition of connecting surfaces and a high-capacity, low-pressure design that reduces damage to the airway.

Pro manufacturer of high-end medical consumables

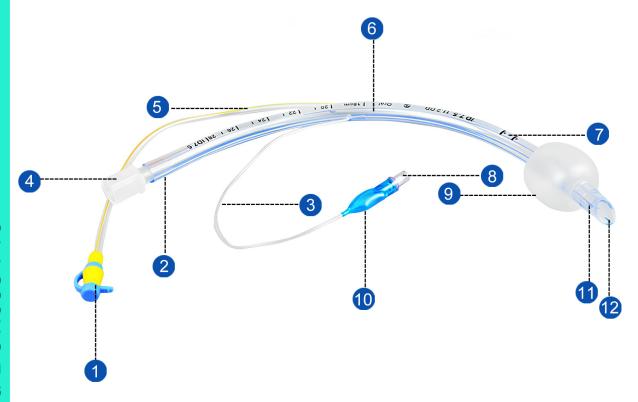

Medical grade UV adhesive, excellent tensile strength.3

Highly elastic airway tube with excellent flexibility and compression resistance.⁴ (Shore hardness from 20A to 65A can be customized)

The left-facing bevel tip improves the visualization of the vocal cords during laryngoscopy. It also increases the diameter of the primary opening, making it less likely to be blocked by secretions.

- 1 : Silicone-containing PVC or TPU material available.PU cuff is optional.
- 2: Precise design of the curvature of the airway tube using 3D scanning technology.
- 3 : Failure testing of individual connection components using tensile and compression testers ensures that the tensile strength meets design criteria.
- 4 : Bite force simulation of the main tube using a compression tester ensures that the compression resistance meets the design criteria.

PVC Endotracheal Tube With Suction Lumen

1) Suction Connector; 2) Radio-opaque Line; 3) Inflation Line;

4)15mm Connector;

5) Suction Line;

6) Airway Tube;

7) Depth Marker Lines; 8) Valve;

9) High Volume Low Pressure Cuff;

10) Pilot Balloon;

11) Murphy Eye;

12) Bevel &Tip

Size	5.0#	5.5#	6.0#	6.5#	7.0#	7.5#	8.0#	8.5#	9.0#
Packing:		20pcs/box			10pcs/box				

Widely used in the following applications:

Intensive Care Unit Oral & Maxillofacial Surgery Ambulance Equipment Emergency Dept. Respiratory Dept. Anesthesiology Dept. Pre-hospital Emergency
